

Improved Student Achievement

After careful consideration and research using our internal data, we have identified three key methods to improve student achievement using a 200 day calendar. These are IXL online platform, teacher created and individual student aligned packets, and project-based learning. We feel that these three options are the most effective way to meet the needs of our students and ensure their academic success. We believe that this variety of instruction provides a comprehensive and engaging approach to learning that will benefit our students in numerous ways. As we continue to adapt to the changing climate of education, students will work on mastering lessons on IXL from home, completing teacher created packets and home based projects in place of traditional teacher-led instruction in the classroom. These methods will allow our students to further develop their critical thinking skills, gain a deeper understanding of core concepts, and ultimately improve their academic performance.

By implementing these additional instructional hours and strategies, the results will be extremely beneficial. Our students will be able to connect with the material in new and exciting ways, and we anticipate their confidence to grow significantly as they master these foundational skills in the core content areas.

We are certain that the use of IXL will be of great advantage for our students. IXL is an ESSA approved, evidence based program proven effective across the world. With individually tailored programs, our students can learn at their own pace while receiving personalized feedback to ensure they grasp even the most challenging concepts. IXL is a powerful online learning tool that provides students with a wide range of academic content aligned to their curriculum.

As we aim to provide our students with the best individualized education possible, we believe that our teacher created packets will be an invaluable resource to complement their in-class lessons. By creating these packets, our teachers can provide students with targeted and meaningful learning materials that are aligned with our curriculum and Arizona state standards. These teacher packets will be created with the intention of catering to the specific needs of our students. Through this practice, our students will be able to develop their numeracy and literacy skills, at a level suited to their individual needs. We have no doubt that it will not only motivate them to learn but also contribute to their overall academic success.

We believe that Project Based Learning from home will also be valuable for our students. Project-based learning involves a comprehensive approach to teaching, where students are actively engaged in critical thinking and problem solving. It is a student-centered approach that provides opportunities for students to connect their learning with the real world, enabling them to develop a deeper understanding of the material they are studying. We are confident that teachers have the skills and expertise required for successful implementation. We will support our students and families with all needs for project based learning remotely.

As an organization that values providing students with the best possible learning experience, we believe that IXL, teacher created packets and home projects can offer our students a competitive edge in their academic pursuits. We believe that implementing these strategies for use outside of our classrooms can benefit students at all levels. We are confident that we can achieve this goal and improve student achievement.
